Trim-A-Slab is designed for use with rounded-edge slabs typically found in residential driveways, and sidewalks both residential and commercial. See the figures below for cross-section views of Trim-A-Slab in the range of expansion joint sizes for which this product is recommended.

Installed in a 7/8" wide joint

Comparison with 3/4" size

Installed in a 1-1/8" wide joint

Note that Trim-A-Slab will fit in joints that are smaller than 7/8", however, the top 'crown' of Trim-A-Slab will then protrude above the slab surface, which may be a tripping hazard. It is recommended to use 3/4" Trim-A-Slab in expansion joints below 7/8" wide.
