Minimum width	5/8" (0.625)	5/8" (0.625)
Maximum width	7/8" (0.875)	7/8" (0.875)

Trim-A-Slab is designed for use with rounded-edge slabs typically found in residential driveways, and sidewalks both residential and commercial. See the figures below for cross-section views of Trim-A-Slab in the range of expansion joint sizes for which this product is recommended.

Installed in a 5/8" wide joint

3/4" wide joint

Installed in a 7/8" wide joint

Note that Trim-A-Slab will fit in joints that are smaller than 5/8", however, the top 'crown' of Trim-A-Slab will then protrude above the slab surface, which may be a tripping hazard. It is not recommended to use Trim-A-Slab in expansion joints below 5/8" for this reason.
