

SPECIFICATION

Trim-A-Slab Expansion Joint
Repair & Replacement
July 2026

Trim-A-Slab is used in exterior applications in residential and commercial sidewalks and driveways. Trim-A-Slab anchors itself between the slabs with flexible beam-like elements at its lower extremity. Trim-A-slab maintains its height in an expansion joint by being larger than the gap, the rounded crown of Trim-A-Slab sitting between the rounded edges of the slabs, or on the surface of the slabs. Trim-A-Slab may also be used against foundations, i.e. with one vertical surface.

Trim-A-slab is self-supporting and can take traffic immediately after installation. Trim-A-Slab will support pedestrian and vehicular traffic, as typical found in residential or light commercial applications.

It is recommended for the 1-3/8" size that a supporting fill such as sand be used below the product to provide additional support.

Material specifications:

Material: 75-85 Durometer Flexible PVC with UV inhibitors

Installation temperature range: -10°F to +130°F

Expected structural life: 10+ years

Expected color retention: 5+ years

Limited Warranty

Trim-A-Slab is warranted to be free of defects in materials or workmanship at the time of shipment and is further warranted to retain color and structural integrity for a period of 5 years. Changes in length are expressly exempt from any warranty. Trim-A-Slab LLC will replace or refund, at its discretion, any material proven to be defective. No warranty or claim is made as to the suitability of Trim-A-Slab in specific applications.

California Prop 65

Trim-A-Slab contains Pthalates. 

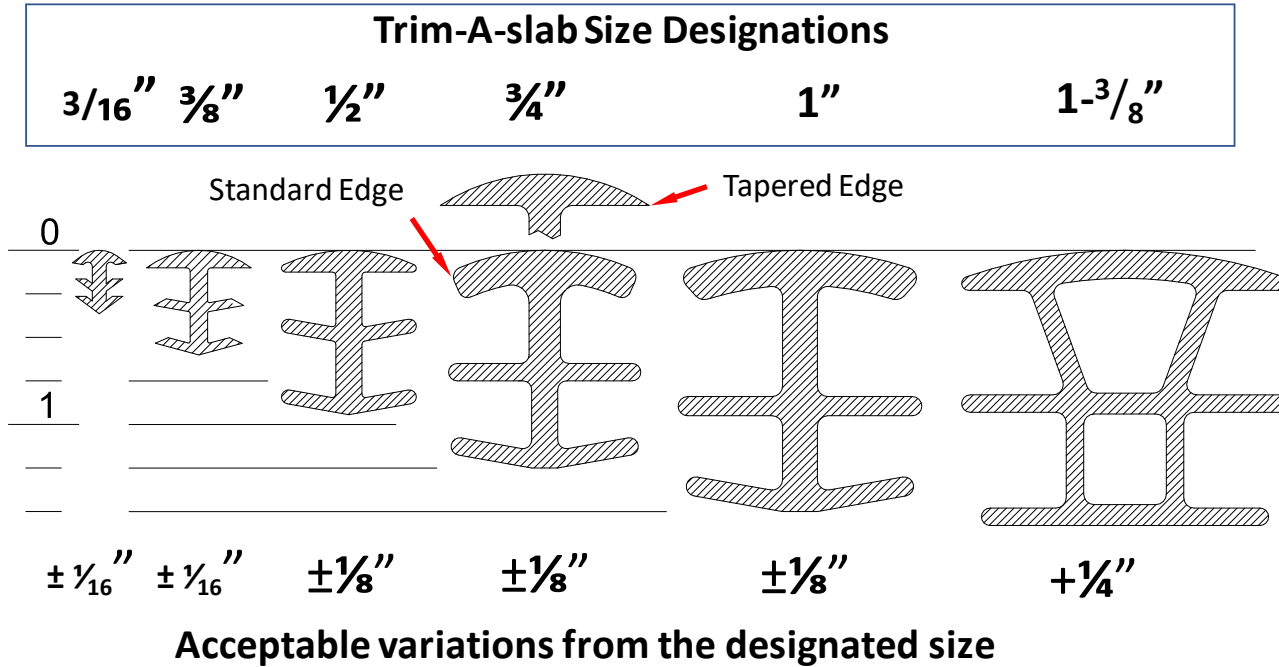

WARNING: This product can expose you to chemicals including Phthalates which are known to the State of California to cause cancer and birth defects or other reproductive harm. For more information go to www.P65Warnings.ca.gov.
